

Chess.com API - Data Visualisation

2022-08-22

Summary

I've played a decent number of chess games on the chess.com platform since 2019 and all my chess data can be explored using the API endpoints documented inside the website.

I was interested in monitoring how my rating has changed over the cumulative number of games played.

I didn't make much improvement given that I was playing chess casually and was not learning chess strategy in depth.

Though it was still fun to visualise the progression graphically.
